Uni-Bell Comments On Pennsylvania Corrugated HDPE Pipe Study

September 30, 1996 – 1 page

The Fall 1996 issue of *Uni-Bell PVC Pipe News* contains important information and observations concerning cracking and buckling problems involved with a corrugated HDPE installation in Pennsylvania.

The newsletter also contains significant information and comments on AASHTO's proposal to adopt new cell classifications that would affect the long-term performance requirements for HDPE pipe.

As a service to its members, the American Concrete Pipe Association is disseminating copies of the Fall 1996 issue of *Uni-Bell PVC Pipe News*.

Members may wish to use the enclosed newsletter as a "master" document from which photocopies can be made for distribution to customers and prospects. We caution you against taking excerpts from these articles and strongly recommend you reproduce the newsletter in its entirety. A limited number of additional copies of the newsletter are available from the Association's office in Dallas. For information about obtaining additional copies, contact Donna Hoye, director of services, at (972) 506-7216.

The Association plans to develop more materials on this topic in the coming weeks. If you have suggestions on specific subjects you would like to see covered or information concerning the study, contact Mike Saubert, director of marketing for the American Concrete Pipe Association.
